

Pinnacle
Restaurant Manager

The AI command center for independent restaurants

Pinnacle turns operating data — invoices, recipes, labor, and sales — into daily profit decisions before month-end closes.

Seed · \$750K · \$79–\$449/location/mo · Live demo on request

Independent restaurants lose margin in the gap between what happened on the floor and what the owner sees in spreadsheets

Fragmented stack

POS, scheduling, inventory, and accounting don't share one source of truth.

Margin leaks

Vendor price drift, waste, and labor overshoot surface after the P&L — too late to fix.

No daily answer

Owners export CSVs instead of asking "what's hurting profit this week?"

Typical independent runs **Toast or Square + spreadsheets + 2–4 point tools** — and still reconciles manually every week.

Operator discovery confirms the pain — and the wedge we built first

12+

Operator conversations

10–15h

Weekly reconciliation cited

"I find out food cost moved when the accountant calls — not when the vendor invoice lands."

— Full-service owner, 85 seats, Austin TX

"MarginEdge handles the invoice, but it doesn't talk to my menu or labor."

— GM, 2-location group, Denver CO

"I need one place that tells me what to fix today, not another dashboard."

— Independent operator, 60 seats, Nashville TN

Stacks we replace or consolidate

- **POS:** Toast, Square, Clover
- **Labor:** 7shifts, spreadsheets
- **Food cost:** MarginEdge, xtraCHEF, manual
- **Back office:** Restaurant365, QuickBooks exports
- **Menu/channels:** Manual + delivery tablets

Wedge validated first: invoice → recipe cost → margin alert → owner action. POS and payroll extend the same data model — we are not pitching "beat Toast at checkout day one."

12+ US full-service operator interviews (2025–2026). Quotes anonymized; update with named references as pilots convert.

Bottom-up: full-service independents and 2–10 location groups are an underserved \$2B+ software wedge

Layer	Calculation	Estimate
TAM	~660K US restaurant units × ~\$3.6K/yr avg software spend	~\$2.4B US restaurant ops software
SAM	~230K US full-service independents + small groups × \$3–6K/yr	~\$690M–\$1.4B
SOM (3 yr)	500 loc × \$3K ARPU · software wedge ceiling, not a seed-round target	~\$1.5M ARR at scale

Why now

AI can answer owner questions from live ops data — not generic benchmarks.

Why independents

70% of US locations are independent or franchisee-operated — underserved by enterprise POS bundles.

Why profit visibility

Post-COVID margin pressure makes daily COGS and labor visibility a buying trigger.

Sources: National Restaurant Association *Facts at a Glance* (2024–2025, ~1M US foodservice locations); USDA ERS food-away-from-home; internal ARPU from published POS/back-office pricing (Toast, R365, MarginEdge). **Bridge to financial plan:** slides 13–14 model 18 months (\$150K base / \$430K upside ARR); 3-yr SOM assumes scaled acquisition after retention proof — see appendix.

Pinnacle turns restaurant operating data into daily profit decisions

— one login, one data model

The wedge: Scan invoice → update recipe costs → flag margin leak → AI tells the owner what to fix → menu/labor/purchasing action *before* month-end.

- **Invoice OCR + live COGS** — hardest to copy; compounds with menu and labor data
- **AI Command Center** — cross-domain profit answers from *your* orders, waste, and vendor prices
- **Connected platform** — POS, KDS, payroll, and menu sync feed the same insight layer (not six separate pitches)

What we are not claiming day one

Out-scaling Toast on payment reliability. We win on **owner profit visibility** first — checkout integrates, it is not the wedge.

Loading Dock — Invoice OCR & 3-way match

SCANNED INVOICE

ISLANDS WEST DISTRIBUTORS
INV # IW-88421 - Mar 4, 2026

CABRS10 CABBAGE RED 3 cs @ 208.97
TOFU10 TOFU EXTRA FIRM 2 cs @ 149.52
TOTAL DUE 925.96

MATCH
3-way matched

EXTRACTED LINE ITEMS → RECIPE COGS

SKU	ITEM	QTY	UNIT	EXTENDED
CABRS10	Red cabbage	3 cs	\$208.97	\$626.91
TOFU10	Extra firm tofu	2 cs	\$149.52	\$299.05
Invoice total				\$925.96

Price alert: Brisket plate sub-recipe cost +4.2% — margin flagged for owner review

Live product — invoice OCR extracts line items, matches PO/receipt, and rolls costs into menu margin alerts

One week in the life: vendor price change → margin alert → owner action

MON**Invoice scanned at the loading dock**

OCR extracts SKU, qty, and unit price · 3-way match against PO · inventory and recipe costs update automatically

TUE**Brisket cost rises 11%**

Sub-recipe roll-up changes menu margin on the brisket plate across POS and delivery channels

WED**AI Command Center flags the leak**

"Brisket plate margin dropped 4 pts — vendor price + prep waste up." Suggested: adjust menu price or swap portion

THU**Owner updates price / channel markup**

Menu engineering matrix shows star vs. dog · changes sync to QR and delivery menus

FRI**Weekend rush with clearer prep and labor plan**

Labor vs. sales visible live · no CSV export · no waiting for the accountant

Three forces make daily profit visibility buyable now — not in a future roadmap slide

AI on private data

LLMs can synthesize cross-domain answers when POS, invoices, and labor share one database.

API-first integrations

Stripe, Square, QuickBooks, and delivery channels are connectable without a services army.

Margin pressure

Operators must manage food and labor daily — monthly P&L-only tools are too slow.

Product is live today: self-serve signup, Stripe billing, embedded marketing-site demo — **live walkthrough on request** (no credentials in this deck).

Founding-10 go-to-market

Referral

Operator-to-operator

- Target: full-service independents (50–200 seats) and 2–10 location groups upgrading from POS + spreadsheets
- **\$300K GTM:** founder-led sales · Month-3 CS hire · onboarding · demos · operator success — *AE only after repeatable conversion*
- Early success bar: 90%+ onboarding completion and referenceable retention before AE hire or paid ads

Founding-10 pricing: \$149/mo locks Growth-plan scope at 40% off standard \$249/mo list.

Pinnacle's wedge: live profit intelligence across invoices, menu, labor, and sales — not checkout alone

Category	Incumbent	Gap	Pinnacle
Checkout & payments	Toast, Square	Strong at register scale & brand trust	Integrates — not trying to out-scale day one
Invoice → food cost	MarginEdge, xtraCHEF	Invoice-only; weak menu/labor tie-in	OCR + recipe roll-up + alerts
Back office / accounting	Restaurant365	Heavy implementation; owner UX	Daily owner command center
Labor scheduling	7shifts	Siloed from margin story	Labor in same profit model
Menu / delivery sync	Chowly, Olo, manual	Channel sync without COGS loop	Price change → margin view
AI owner Q&A on live data	Rare / add-ons	Generic or exported data	Native Command Center

Solo founder today — full-stack builder with operator discovery and founder-led sales

David Foy

Founder & CEO · sole operator today

Built from 12+ US operator conversations and live workflow testing in our operator sandbox (invoice OCR, loading dock, margin alerts). Ships product, runs demos, and closes founding operator conversations personally.

- **Why one founder shipped this:** modular architecture, AI-assisted engineering velocity, and a single data model across modules — not six startups glued together
- Production SaaS: Stripe billing, invoice OCR, AI Command Center, tenant-scoped security, Vercel deploy
- Month-3 hire: Head of Customer Success (funded) — founder stays on product + founder sales through first 10 locations

Bus factor — addressed honestly

Solo today. Mitigation: documented codebase, hosted infra, CS hire at Month 3, and advisor relationships in restaurant ops and SaaS finance.

Advisor — restaurant operations

Sam Ramseyer — former multi-unit independent operator (4 locations, full P&L ownership). Advises on operator workflows, onboarding, and GTM with regional restaurant groups.

Security & trust

Multi-tenant isolation · Stripe-hosted checkout (no raw card storage) · Square/Stripe Connect for guest payments · role-based access · tenant-scoped API layer

18-month financial plan — conservative base and upside path

Milestone	Base case	Upside
Month 6	10 loc · \$24K ARR	—
Month 12	50 loc · \$150K ARR	80 loc · \$270K ARR
Month 18	75 loc · \$240K ARR	120 loc · \$430K ARR

Seed round targets month 12. Year 3 illustrative path: ~200 loc (\$670K) base · ~500 loc (\$1.5M) SOM ceiling — post-retention GTM scale.

Planning assumptions: founder-led GTM through month 12 · CS hire at month 3 · avg ~\$250/mo realized ARPU at month 12.

Raising \$750,000 to convert a launch-ready product into 50+ paying locations and proven retention

\$750,000

Seed · SAFE or priced equity · 18-month runway · GTM-weighted to prove revenue efficiency

This round is designed to prove repeatable retention and expansion before scaling paid acquisition — not to blitz GTM before product-market fit is demonstrated.

\$300K

Founder-led sales · Month-3 CS hire · onboarding · demos · operator success

\$262K

QuickBooks/Xero live, delivery APIs, OCR accuracy

\$188K

Legal, infra, security, buffer

Live demo: available on request — david@pinnacle-designs.com

Product: pinnacle-restaurant-manager.vercel.app · Confidential — Pinnacle Designs LLC

Appendix: bottom-up market math and sources

Input	Method	Source / assumption
~660K units	US foodservice locations minus limited-service QSR	NRA <i>Facts at a Glance</i> (~1M total); ~34% QSR excluded → ~660K addressable units
~\$3.6K/yr ARPU	Blended ops software spend per location	Toast, R365, MarginEdge list pricing — mid-market independent blend
~230K units	Full-service independents + 2–10 location groups	NRA segments + USDA independent share (~70%); filtered to invoice-driven COGS buyers
\$3–6K/yr ARPU	Growth/Pro/Group weighted mix	Starter is entry tier only; SAM ARPU reflects target buyers on Growth+ plans and group roll-ups
500 locations	3-yr wedge ceiling, not seed target	Post-retention GTM scale; seed plan tops at \$240K–\$430K ARR by month 18
